

QuickFill

A quick, cost-effective and long-lasting repair for potholes and cracks

Key benefits

- Time and energy efficient
- No large or specialist machinery needed
- Safe for traffic in less than 20 minutes
- Blends in with existing surface

Applications

Quickfill is designed to repair many types of surface defects in roads and walkways, including;

- Potholes and cracks up to 65mm deep and 400mm wide.
- Gaps around the edges of metal manholes, gullies, etc.
- Damage to road edges along concrete footpaths, kerbing etc.

A solution from one of the industry's most trusted names

Founded in 1972, Kelly Bros International develops and manufactures high quality products that help reduce hazards and danger on the roads, and ultimately saves lives.

We are one of the industry's foremost manufacturers and we are a trusted supplier to authorities and agencies worldwide. All our products are manufactured in our sustainable manufacturing plant.

No large machinery needed

QuickFill is hot-applied using a gas torch. No specialist road repair equipment is required. This helps reduce costs making budgets go further.

A long-lasting, high-quality repair all year round

QuickFill can be applied all year round so is suitable for carrying out emergency repairs even during freezing Winter weather.

The specially formulated, resin based material moulds to the defect and self-levels giving an even finish to the surface. Stone can be added on top to blend in with the existing surface.

Overall, QuickFill is a long-lasting, high-quality solution that reduces maintenance requirements and can extend the life of the pavement.

Time and energy efficient

The product is in pellet form when cold and heated with a gas torch during application, this makes it more energy efficient than alternative solutions that need to be kept hot.

Repairs typically take less than 20 minutes from start to reopening the carriageway, meaning more repairs can be completed each day, improving efficiency.

How to use

Below is an example of a repair carried out using QuickFill along with natural aggregate to blend in with the existing pavement.

-  Clean the area for repair thoroughly
-  Use gas torch to further clean and heat the area
-  Apply QuickFill and heat using gas torch
-  Add anti-skid aggregates and heat using gas torch
-  Add more QuickFill as required and repeat the process
-  Add more anti-skid aggregates as required
-  Remove excess aggregate from the area and re-open to traffic
