

# RoadGrip Repair

**A quick, cost-effective and long-lasting repair for cracks, micro-cracks, joints, potholes and larger areas of surface damage**

## Key benefits

- One product for multiple types of road damage
- No large or specialist road mending machinery needed
- No heating of product needed
- Safe for traffic after 25 minutes

## Applications

RoadGrip Repair's structure and application method make it suitable for repairing a wide variety of damaged road surfaces, including:

- Small potholes
- Large cracks
- Surfaces with micro-cracks
- Car burnout damage to surface
- Gaps between metal bridge joints and asphalt

Available in Traffic Grey A & B and Traffic Black shades for colour-matching to the existing surface. Coloured stones or chippings can also be added to create a higher quality visual finish.

**A solution from one of the industry's most trusted names**

**Founded in 1972, Kelly Bros International develops and manufactures high quality products that help reduce hazards and danger on the roads, and ultimately saves lives.**

We are one of the industry's foremost manufacturers and we are a trusted supplier to authorities and agencies worldwide. All our products are manufactured in our sustainable manufacturing plant.

# RoadGrip Repair

## No large machinery needed

RoadGrip Repair is a cold-applied product that does not require specialist road repair equipment.

The minimum equipment requirement is a battery-operated drill with paddle mixer attachment, a spatula or a paint roller and/or a screed-box mould for smaller jobs.

This helps to reduce the costs of road repair and maintenance, helping budgets to go further.

## Long-lasting solution

RoadGrip Repair is self-leveling which ensures even micro-cracks are filled.

The in-mix aggregate also ensures that high anti-skid properties are always achieved.

It is applied by hand without the use of heavy compaction machinery, which means no stress to the surface and reduced risk of new micro-cracks being created in the area.

Overall, it is a long-lasting solution that reduces maintenance and repeat repair requirements.

## Reopen the carriageway rapidly

RoadGrip Repair is quick to apply and quick to set. It is normally possible to reopen a carriageway after 25 minutes.

It also means reduced resource requirements so more repairs can be completed each day, improving the efficiency of road repair teams.

Blends in with existing surface

## How to use

Completing a repair using RoadGrip Repair typically takes 25 minutes from start to reopening the carriageway.

- 1 Clean the area for repair thoroughly
- 2 Use gas torch to further clean the area if required
- 3 Prepare and activate RoadGrip Repair
- 4 Apply RoadGrip Repair
- 5 Apply anti-skid aggregates
- 6 Remove excess aggregate from the area
- 7 Reopen carriageway
